PROFILE

Hello

My name is Anthony Nguyen, a 5+ years Magento2 Backend developer in Viet Nam.

I have professional experience in developing and customizing Magento 2 extensions and e-Commerce websites in both front-end and back-end development.

There is no doubt that Magento is a high-performance, scalable eCommerce solution for fast-growing businesses, and I am keen on this open-source platform a lot.

Over the last 5 years, I have worked with Magento extensions and projects of different complexity from start-ups to big companies as well.

I also join the consultant team to help my colleagues with their questions in dev docs and check the technical aspects before they publish their posts.
